	SHENG PRIMARY	IUNWANG EXAMINER	

U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05) Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments have been fully considered but found not persuasive. Applicant argues that the specification includes numerous examples of known agents that are functionally defined. The Examiner's position is that although various examples of "inhibitors of vascular cell proliferation" and "chemotherapeutic agent" are defined in the specification, there is no support or enablement for ALL agents as defined above. Applicant also argue that Black has nothing to do with capillaries or with inhibiting cerebral vasospasm that results from SAH. This is not persuasive because what Applicants asserd herein is deemed to be merely the proposed or claimed mechanism of action of the treatment. Note that the mechanism of action of a treatment does not have a bearing on the patentability of the invention if the method steps are already known, i.e., administering methotrexate to the same patient herein having brain tumors or cancers (see abstract of Black's patent) even though applicant has proposed or claimed the mechanism. Applicant's recitation of a new mechanism of action for the prior art method will not, by itself, distinguish the instant claims over the prior art teaching the same or nearly the same method steps. Further, the claiming of a new use, new function or unknown property which is inherently present in the prior art method will not make the claim patentable as set forth in the 102(b) rejection above. Moreover, mere recognition of latent properties in the prior art does not render novel or nonobvious an otherwise known invention. See In re Wiseman, 201 USPQ 658 (CCPA 1979)...
